FUNCAS (C/ CABALLERO DE GRACIA, 28)

SEMINAR
INTERNAL CARBON PRICING
GLOBAL OUTLOOK AND APPLICATIONS

The use of price approaches to tackle carbon emissions has been widely defended by experts on several grounds such as cost-effectiveness or the positive effects on green innovation. Companies might also introduce internal carbon prices to achieve different business and environmental objectives in an efficient manner. This seminar will discuss the reasons for the use of such instruments and will also provide an overview of existing applications and global trends.

Nicolette Bartlett

Global Director, Carbon Disclosure Project (CDP)

CDP runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts. Nicolette Bartlett is responsible for the implementation of major CDP initiatives such as the Science Based Targets, RE100, and work on carbon pricing, delivered as a partner of the Carbon Pricing Leadership Coalition.

To attend the seminar please send an email to Info@eforenergy.org before Monday 25, 2019.
