SEMINAR

UPDATE AND PERSPECTIVES OF CLIMATE AND ENERGY POLICIES IN CHINA

In the last few years China has been introducing an increasingly ambitious set of climate mitigation policies in the energy domain. These policies are globally relevant given the size of Chinese greenhouse gas emissions but also because of their influence on the design and functioning of climate policies elsewhere.

Zhang Xiliang

Professor and Executive Director IEEA, Tsinghua University

Professor Zhang is one of the most renowned Chinese academic experts in energy and climate mitigation. He has played a relevant role in the definition and implementation of policies for the promotion of renewable technologies in China and of the national system of greenhouse gas emissions trading.

Attendance is free upon registration, until May 10, at info@eforenergy.org.
